Communication Networks

Exercise 5

Avoiding convergence issues in Bellman-Ford

Introduction to this week's exercise

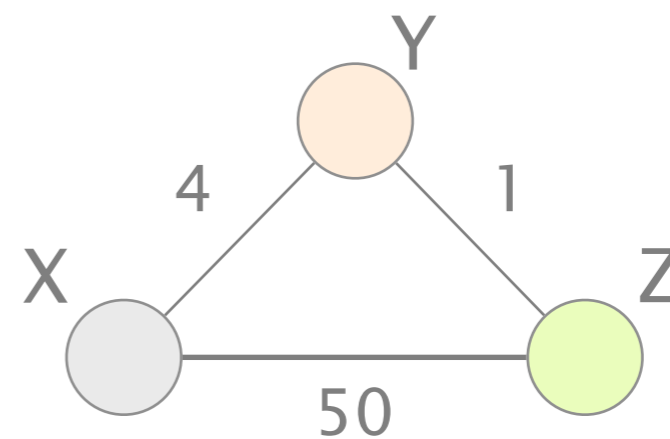

Time to solve the exercise

In the lecture we saw that
Bellman-Ford may lead to slow convergence

Consider the following network

Consider the following network leading to the following vectors

Y
vector

dest.	via
X	Z

Y routes to X directly

X 4 6

Z
vector

dest.	via
X	Y

Z routes to X via Y

X 50 5

t = 0

(X,Y) weight changes
from 4 to 60

time t=0

Y
vector

dest.	via
X	Z

X 4 6

Z
vector

dest.	via
X	Y

X 50 5

t = 1

Y updates its vector,
sends it to X and Z

t=0

Y
vector

dest.	via	
X	4	6

t=1

dest.	via	
X	60	6

Z
vector

dest.	via	
X	50	5

t = 1

we have a **routing loop**:

packets to X ping-pong between Y-Z

t=0

t=1

Y
vector

dest.	via
X	Z

X 4 6

dest.	via
X	Z

X 60 6

Y routes to X via Z

Z
vector

dest.	via
X	Y

X 50 5

Z routes to X via Y

t = 2

Z updates its vector,
sends it to X and Y

t=0

Y
vector

dest.	via	
	X	Z
X	4	6

X 4 6

t=1

dest.	via	
	X	Z
X	60	6

X 60 6

t=2

Z
vector

dest.	via	
	X	Y
X	50	5

X 50 5

dest.	via	
	X	Y
X	50	7

X 50 7

t = 2

the **routing loop** continues

	t=0	t=1	t=2																		
Y vector	<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><td>X</td><td>Z</td></tr></thead><tbody><tr><td>X</td><td>4 6</td></tr></tbody></table>	dest.	via	X	Z	X	4 6	<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><td>X</td><td>Z</td></tr></thead><tbody><tr><td>X</td><td>60 6</td></tr></tbody></table>	dest.	via	X	Z	X	60 6	<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><td>X</td><td>Z</td></tr></thead><tbody><tr><td>X</td><td>60 6</td></tr></tbody></table> <p>Y routes to X via Z</p>	dest.	via	X	Z	X	60 6
dest.	via																				
X	Z																				
X	4 6																				
dest.	via																				
X	Z																				
X	60 6																				
dest.	via																				
X	Z																				
X	60 6																				
Z vector	<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><td>X</td><td>Y</td></tr></thead><tbody><tr><td>X</td><td>50 5</td></tr></tbody></table>	dest.	via	X	Y	X	50 5	<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><td>X</td><td>Y</td></tr></thead><tbody><tr><td>X</td><td>50 5</td></tr></tbody></table>	dest.	via	X	Y	X	50 5	<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><td>X</td><td>Y</td></tr></thead><tbody><tr><td>X</td><td>50 7</td></tr></tbody></table> <p>Z routes to X via Y</p>	dest.	via	X	Y	X	50 7
dest.	via																				
X	Y																				
X	50 5																				
dest.	via																				
X	Y																				
X	50 5																				
dest.	via																				
X	Y																				
X	50 7																				

t = 46

the routing loop finishes

t=45

Y
vector

dest.	via	
	X	Z
X	60	50

X 60 50

t=46

Z
vector

dest.	via	
	X	Y
X	50	51

X 50 51

t = 48

the network converges

t=45

t=46

t=47

t=48

Y
vector

dest.	via
X	Z

X 60 50

dest.	via
X	Z

X 60 51

Z
vector

dest.	via
X	Y

X 50 51

dest.	via
X	Y

X 50 52

Let's try to
fix routing loops and slow convergence

Whenever a router (say X) uses another one (say Y),
X will announce to Y an infinite cost

The technique is known as **poisoned reverse**

Y
vector

dest.	via
X	Z

X 4 ∞

As Z routes to X via Y,
Z announces to Y an infinite cost

Z
vector

dest.	via
X	Y

X 50 5

t = 0

(X,Y) weight changes
from 4 to 60

t=0

Y
vector

dest.	via	
	X	Z
X	4	∞

Z
vector

dest.	via	
	X	Y
X	50	5

t = 1

Y updates its vector,
sends it to X and Z

t=0

Y
vector

dest.	via
X	Z

X 4 ∞

Z
vector

dest.	via
X	Y

X 50 5

t=1

dest.	via
X	Z

X 60 ∞

t = 2

Z updates its vector,
sends it to X and Y

t=0

Y
vector

dest.	via
X	Z

X 4 ∞

t=1

dest.	via
X	Z

X 60 ∞

t=2

Z
vector

dest.	via
X	Y

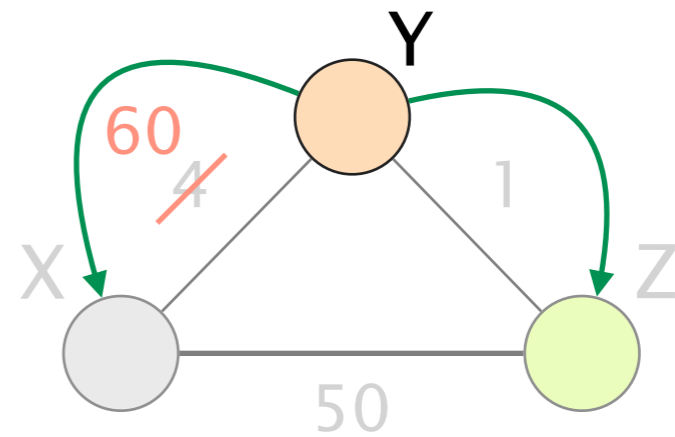

X 50 5

dest.	via
X	Y

X 50 61

t = 3

Y updates its vector,
sends it to X and Z

	t=0	t=1	t=2	t=3																		
Y vector	<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><th>X</th><th>Z</th></tr></thead><tbody><tr><td>4</td><td>∞</td></tr></tbody></table>	dest.	via	X	Z	4	∞	<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><th>X</th><th>Z</th></tr></thead><tbody><tr><td>60</td><td>∞</td></tr></tbody></table>	dest.	via	X	Z	60	∞		<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><th>X</th><th>Z</th></tr></thead><tbody><tr><td>60</td><td>51</td></tr></tbody></table>	dest.	via	X	Z	60	51
dest.	via																					
X	Z																					
4	∞																					
dest.	via																					
X	Z																					
60	∞																					
dest.	via																					
X	Z																					
60	51																					
Z vector	<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><th>X</th><th>Y</th></tr></thead><tbody><tr><td>50</td><td>5</td></tr></tbody></table>	dest.	via	X	Y	50	5		<table border="1"><thead><tr><th>dest.</th><th>via</th></tr><tr><th>X</th><th>Y</th></tr></thead><tbody><tr><td>50</td><td>61</td></tr></tbody></table>	dest.	via	X	Y	50	61							
dest.	via																					
X	Y																					
50	5																					
dest.	via																					
X	Y																					
50	61																					

t = 4

Z updates its vector,
sends it to X and Y

t=4

Y
vector

Z
vector

dest.	via	
	X	Y
X	50	∞

X 50 ∞

t > 4

no one updates its vector

network has converged!

t=4

t>4

Y
vector

dest.	via
X	Z

X 60 51

Z
vector

dest.	via
X	Y

X 50 ∞

dest.	via
X	Y

X 50 ∞

While poisoned reverse solved this case,
it does **not** solve converge issues in general

see exercise task 1

Communication Networks

Exercise 5

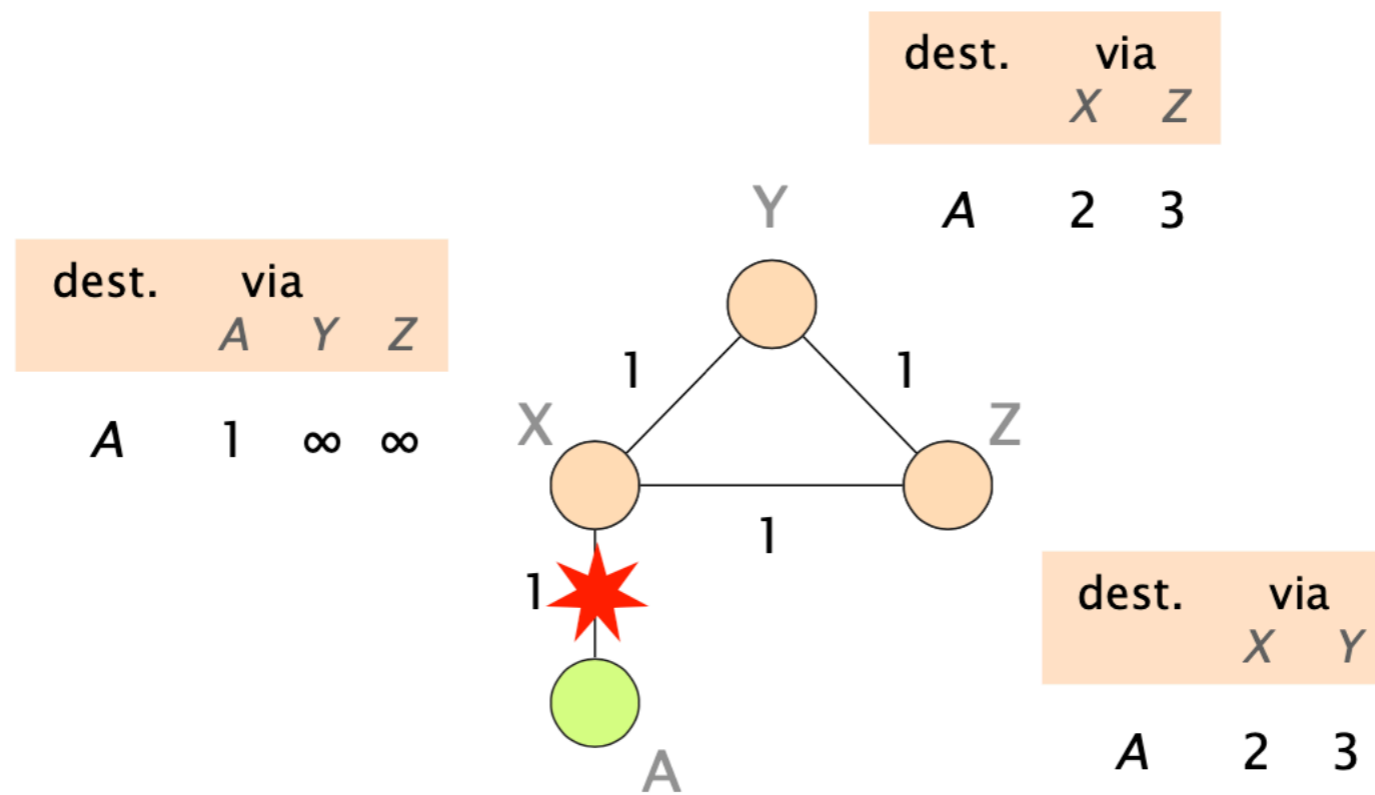

Avoiding convergence issues in Bellman–Ford

Introduction to this week's exercise

Time to solve the exercise

Task 1: Convergence with Poisoned Reverse

Task 2: Convergence (Exam-Style Question)

Loopy or not?

Communication Networks

Exercise 5
